

Developer guide (Severus)

Written by: Angelo Geant A. Gaviola

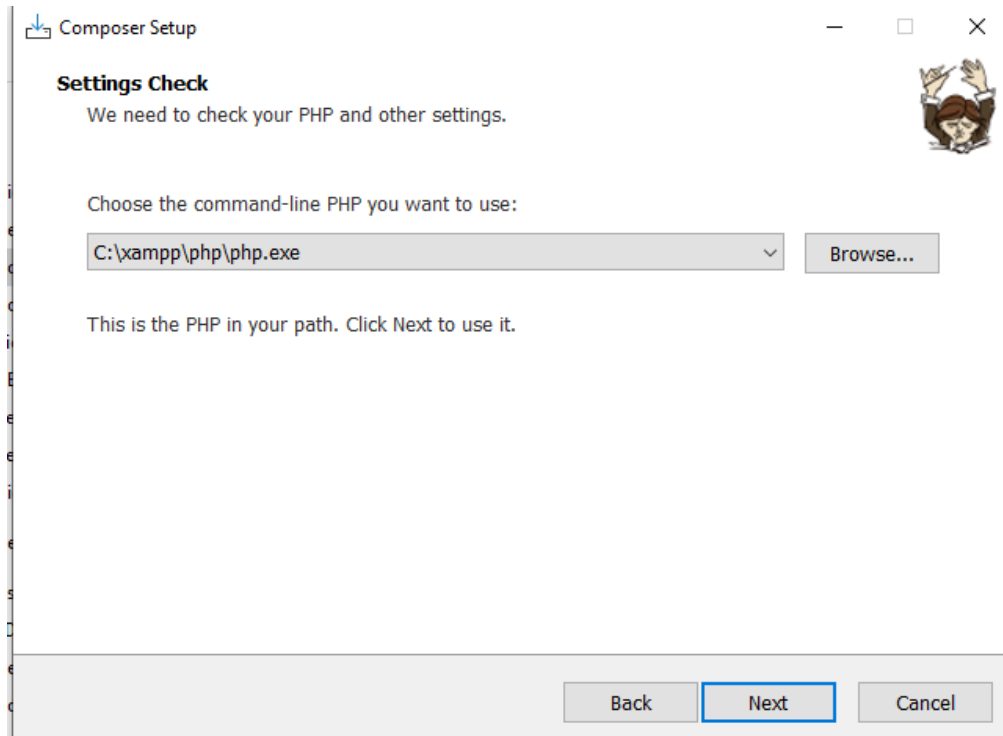

Getting started (How to setup the project)

Things that are needed

1. XAMPP Version [8.1.12 \(PHP 8.1.12\)](#)
2. [Composer](#)

Setting up composer

1. Open the composer executable file
2. Set the commandline-php to use xampp's php

3. Hit next and continue

Setting up node.js

1. Open the node.js executable file
2. Just hit next, use default settings

Installing the dependencies of the project

1. Go to the directory of the designated project with the command line.
2. Install the composer dependencies "composer install"
3. Copy ".env.example" as ".env"
4. Change the following settings in the ".env" file.
 - a. DB_USERNAME - your username in your MySQL instance
 - b. DB_PASSWORD - your password in your MySQL instance
5. Turn on your MySQL instance.
6. Run "php artisan migrate --seed"
7. Generate an app key "php artisan key:generate"

8. Run “php artisan serve” to serve the web application
